

HPB-F 105/100Hz Centrifugal fan

The power of AIR

Application

The fan is intended for transport systems of non-aggressive and non-explosive gases pollution. Typical applications are:

- pneumatic transport,
- blowing in drying systems (e.g. graphic machines and plastic processing),
- air blowing systems in combustion/thermal treatment systems (e.g. melting furnaces).

Construction

- high-pressure direct drive centrifugal fan,
- riveted rotor made of aluminum sheet, with B-type blades, dynamically balanced according to ISO 1940-1,
- cast aluminum housing,
- base welded from steel sheet,
- fan painted gray RAL7042 (engine in manufacturer's color),
- maximum temperature of the pumped medium 80°C,
- engine ambient temperature from -15°C to +40°C,
- LG270 standard figure.

Electric motor

- asynchronous, three-phase, 230/400V, 105/110Hz or 400V, 110Hz (depending on engine power),
- insulation class F,
- protection level IP55,
- equipped with PTC thermal protection,
- required use of a frequency converter for proper operation of the fan,
- equipped with one EMC gland = power supply, + one M16 gland for the PTC sensor

Special execution

- any LG/RD figure,
- painting in a color other than the standard one,
- rotor made of galvanized steel sheet,
- rotor made of stainless steel sheet 1.4301,
- rotor made of acid-resistant steel sheet 1.4404,
- motor with a different IP protection level,
- engine equipped with sensors or additional cooling.

* Measurement made at a distance of 1.5m from the outlet, for $\varnothing = 2/3 \cdot \varnothing_{max}$

** the value of the rated current may vary depending on the manufacturer of the electric motor used.

The motor power converter (inverter) must have the following U(f) assignment:

If the recommendations are not followed, the motor current increases disproportionately and the drive motor does not reach its rated speed. In no case should you set a higher frequency (rotational speed) on the transducer than the frequency of 105/110Hz given on the nameplate, as the motor may be overloaded or the fan may be damaged due to too high rotational speed. The so-called boost, because it causes the drive motor to heat up too much.

To protect the drive motor, connect a temperature sensor to the appropriate inputs of the transmitter.

U_B - rated motor operating voltage (max value)
 f_B - maximum frequency 105/110Hz

HPB-F 105/100Hz Centrifugal fan

The power of AIR

PERFORMANCE CHARACTERISTICS OF THE FANS

The performance characteristics of the fans are determined for a medium with a temperature of 20°C. Sound pressure level dB(A), determined at a distance of 1,5 m
